Operation

DANGER

• Ensure all connections are properly torqued and enclosure is closed prior to applying power to the device.
• Ensure all mechanical equipment operated by the starter is clear for safe operation in case of starter activation.
• When in AUTO mode, starter may be activated remotely by the control system.

Operation Modes

ON (HAND)
Place the switch in the ON position to button to manually engage motor.

OFF (RESET)
Placing the switch in the OFF position will disengage the motor.

AUTO
When utilizing AUTO mode, the starter is controlled by a remote Start/Stop command.

Precautions

To prevent injury and property damage, follow these instructions. Failure to adhere to installation/operation procedures and all applicable codes may result in hazards as indicated by warning codes outlined below:

DANGER
indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

WARNING
indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION
indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

This is the safety alert symbol. Read and follow instructions carefully to avoid a dangerous situation.

This symbol alerts the user to the presence of “dangerous voltage” inside the product that might cause harm or electrical shock.

Safety Instructions

DANGER
Equipment can start automatically. Lockout/tagout before servicing.

CAUTION
As with all electrical products, read manual thoroughly. Only qualified, expert personnel should perform maintenance and installation. Contact the nearest authorized service facility for examination, repair, or adjustment. Do not disassemble or repair unit unless described in this manual; death or injury to electrical shock or fire hazard may result. Specifications and manual data subject to change. Consult factory for additional information.

Wiring Schematic (S4 and above)
Installation

**DANGER**

**HAZARDOUS VOLTAGE**
- Disconnect and lock out all power before installing or servicing equipment.
- This equipment may require locking out multiple power sources prior to service.
- Install and wire in accordance with all applicable local & national electrical and construction codes.

**FAILURE TO FOLLOW THESE INSTRUCTIONS MAY RESULT IN DEATH OR SERIOUS INJURY**

**WARNING**
- To maintain overcurrent, short-circuit, and ground-fault protection, the manufacturer's instructions for selecting current elements and setting the instantaneous-trip circuit breaker must be followed.
- Tripping of the instantaneous-trip circuit breaker is an indication that a fault current has been interrupted. Current-carrying components of the magnetic motor controller should be examined and replaced if damaged to reduce the risk of fire or electric shock.
- Do not locate starter in an environment subject to flammable gases, dusts or materials. Contact arcing can induce explosion or fire.
- Locate starter in a location appropriate to enclosure ratings and operational ratings. (e.g. NEMA 1 should only be located in a dry, protected environment).
- Do not allow any metal shavings or debris from installation to enter enclosure.

**Wiring**
- Wire main power input and motor leads to the appropriate terminals tightened to specified torques and to reduce the risk of fire or electric shock.
- Install and wire in accordance with all applicable local & national electrical and construction codes.

**Low Voltage Wiring**
- Control wiring should be run in a separate conduit. The control terminals should be torqued to 2-14AWG wire torqued to 3.5 in-lbs.

**Power Wiring**
- Terminals should be torqued to in-lbs. specified on the starter.

**Control Terminals**
- Automation inputs are provided for customer use (see below).
- For additional detail see the full manual.

---

**Startup**

1. Before applying power, ensure that the transformer is tapped to the appropriate voltage terminal block (208/230/480V).
2. Connect input power to terminals L1-L2-L3, located on the circuit breaker or input terminal blocks if no circuit breaker is present.
3. Connect motor leads to terminals T1-T2-T3, located on the contactor or output terminal blocks.
4. Apply power to the starter (display screen will be illuminated).
5. Adjust the overload FLA to match the nameplate of the motor. (Standard lockout feature must be disabled, see below)

**Standard Lockout Feature**
- In order to make adjustments to the overload, voltage and HP settings, the standard lockout feature must first be disabled. See below for instructions.

**Default Display Screen**
- Press and hold the UP and DOWN buttons for 2 seconds until the display screen matches the display at left.
- Press the ENTER button to change the menu from "LOCKED" to "UNLOCKED."

**Edit FLA Screen**
- Adjustments may now be made to the soft starter settings. The standard lockout feature will automatically re-enable itself after 2 minutes.
- Use the UP and DOWN keys to make adjustments.
- Press ENTER to save setting.

6. Adjust the nominal voltage setting to match the incoming voltage (Standard lockout feature must be disabled).

**Advanced Lockout Feature**
- In order to make adjustments to the soft starter settings, the advanced lockout feature must first be disabled. See below for instructions.

**Default Display Screen**
- Press and hold the UP and DOWN buttons for 8 seconds until the display screen matches the display at left.
- Press the ENTER button to change the menu from "LOCKED" to "UNLOCKED."

**Edit Soft Start Screen**
- Adjustments may now be made to the soft starter settings. The advanced lockout feature will automatically re-enable itself after 2 minutes.

7. Adjust soft starter features to desired settings (Advanced lockout feature must be disabled, see below).

---

**Soft Starter Defaults**

<table>
<thead>
<tr>
<th>Start Mode</th>
<th>Current Limit</th>

</tbody>
</table>

Soft Starter is rated for 6 starts/hour, 20 seconds max start time @ 400% FLA and 6 starts/hour, 30 seconds max start time @ 300% FLA.

8. Motor rotation verification: Apply power to the starter and place the starter in hand mode using the HOA keypad located on the door. If rotation is opposite of desired, two of the motor leads connected to the contactor will need to be switched.

---

**Mounting**
- Mount the starter on a vertical surface, with the line terminals facing up.
